# Green Municipal Fund

## Brownfield Roadmaps 2016

## Newfoundland and Labrador

## INTRODUCTION

The Federation of Canadian Municipalities' (FCM) Green Municipal Fund™ (GMF) has produced this series of brownfield roadmaps to help municipalities and their private-sector partners better understand how to redevelop brownfields in their communities. The roadmaps provide a high-level overview of the brownfield redevelopment process in each province and territory, linking each step to relevant legislative requirements and potential sources of funding.

Developed in close consultation with provincial and territorial governments, each roadmap features an easy-to-follow path through three areas:

- an overview of the brownfield redevelopment process — a description of the steps typically followed when redeveloping a brownfield site in Canada
- provincial requirements — an outline of provincial legislation and policy requirements associated with each step in the process
- funding and incentive programs — a list of relevant resources, such as GMF, that are available to support municipalities and their partners as they undertake brownfield redevelopment

Each roadmap features a flowchart that summarizes the main activities and milestones, illustrates where the steps are connected, and refers to further details in the document.

Visit [\*Revitalize Your Brownfields\*](#) for additional tools, guidance and resources related to brownfield redevelopment.

The information presented is current to the publication date and may not capture all relevant programs. Please contact the responsible organizations to verify up-to-date information.

**NOTE:** This document summarizes current provincial legislation and must not be regarded as a formal legal interpretation. Please refer to the identified legislation for complete details on legislative requirements, and seek legal advice if necessary.

The Government of Canada endowed FCM with \$550 million to establish the Green Municipal Fund™. The Fund supports partnerships and leveraging of both public and private-sector funding to reach higher standards of air, water and soil quality, and climate protection.

## Green Municipal Fund

**The Green Municipal Fund: more than just funding!**

- ▶ We inspire innovation by sharing best practices, project examples and lessons learned.
- ▶ We connect leaders and communities with experts, peers and allies across Canada.
- ▶ We build municipal capacity with training, tools and resources.
- ▶ We help finance innovative projects at competitive rates.

**Contact a GMF advisor today for more information: 1-877-997-9926**

The Government of Canada endowed FCM with \$550 million to establish the Green Municipal Fund™. The Fund supports partnerships and leveraging of both public and private-sector funding to reach higher standards of air, water and soil quality, and climate protection.

# Overview: Brownfield Redevelopment Process

This section outlines the steps typically undertaken in planning, assessing, remediating and redeveloping brownfield sites. Not all of the steps are required for every project. Some steps are suggested best practices and some steps can be performed concurrently. The process is described using universal site remediation terminology.

## 1. Plan

### 1.1 Community-wide brownfield planning activities

This step includes planning activities associated with brownfield redevelopment, such as stakeholder and community engagement and the creation of sustainable community plans, community improvement plans (CIPs), neighbourhood plans and brownfield redevelopment strategies. **Parties typically involved:** municipal planning department, planning consultants.

### 1.2 Standardized and streamlined approval processes for brownfield redevelopment proposals

Municipalities should standardize and streamline approval processes to ensure that brownfield redevelopment proposals are treated in an efficient, consistent and timely manner. Long approval processes can have a significant impact on a project's bottom line and jeopardize its financial viability. The streamlining process should include consultations with stakeholders, such as the public and developers. **Parties typically involved:** municipal planning department, consultants.

### 1.3 Interim land use planning

Municipalities may consider interim land uses for sites that, for financial or other reasons, cannot be redeveloped immediately. In this case, rather than leaving sites vacant, temporary or interim uses (such as parking lots, community gardens or temporary commercial/industrial uses) could be more economically and socially beneficial to the community. However, the interim land use should not increase risks to human health and the environment, nor should it impede future redevelopment to a desirable end use. **Parties typically involved:** municipal planning department, planning consultants.

### 1.4 Identification and inventorying of brownfield sites

In some provinces and territories, information related to brownfields or contaminated sites is compiled into databases or site registries. These inventories may be made available to the public. Municipalities can reference this

information to identify contaminated sites and create a municipal brownfield inventory. Municipalities can also use this information to showcase progress on brownfield redevelopment in their community.

Municipalities should also note that the *Public Sector Accounting Board standard on liability for contaminated sites, Section PS 3260* in the *CPA Canada Public Sector Accounting Handbook* (Chartered Professional Accountants Canada), covers fiscal periods commencing on or after April 1, 2014. Section PS 3260 contains standards for municipalities on how to account for and report a liability associated with the remediation of contaminated sites for which they are responsible. Specifically, it establishes when to recognize and how to measure a liability for remediation. To properly estimate and track the associated liabilities, municipalities may need to develop an inventory of contaminated or potentially contaminated sites. Careful consideration should be given to the scope of Section PS 3260. A liability generally results from contamination at sites that are no longer in productive use or contamination arising from an unexpected event, such as a natural disaster. The standard does not apply to liabilities associated with retiring long-lived tangible capital assets in productive use (for example, an operating solid waste landfill site). For more information, contact *CPA Canada*. **Parties typically involved:** municipal treasury, property, planning, and engineering and works departments; auditors and provincial officials.

## 2. Study

### 2.1 Sustainable remediation and redevelopment

Sustainable remediation considers the full picture when making decisions about brownfield remediation and redevelopment projects. It ensures that all aspects of the project — from assessment to redevelopment — are managed in a way that optimizes and balances environmental, social and economic benefits. A range of remediation and risk management techniques may be considered, such as administrative controls (e.g. zoning and land use restrictions); physical barriers or ground covers (e.g. asphalt); in-situ techniques, which are applied in the ground or in water; and ex-situ techniques, which involve excavating contaminated soil or pumping out groundwater.

### 2.2 Environmental site assessments

Known or suspected contaminated sites must be assessed to determine the type, concentration, location and extent of contamination. This information is gathered by using specific contaminated site assessment approaches, usually performed in phases and with more detailed information collected in each progressive phase. The phases are typically defined as follows:

- **Phase I Environmental Site Assessment:** a preliminary assessment to characterize a site by evaluating current and historical land uses or activities, potential areas of contamination, and surrounding land uses or activities
- **Phase II Environmental Site Assessment:** a preliminary assessment during which field samples are analyzed to determine contaminant types and concentrations
- **Detailed or Delineation Environmental Site Assessment:** in some cases, a more detailed assessment is performed to confirm contaminant types and concentrations, and to delineate contaminated areas

Following the site assessment, the generic provincial remedial objectives (i.e. the concentrations of contaminants allowed in the soil or groundwater based on the specific land use planned) should be reviewed to determine the feasibility of meeting these objectives. In some provinces, these remedial objectives are called remedial or remediation standards or criteria. **Parties typically involved:** municipal engineers and planners, environmental consultants.

### 2.3 Risk assessment

If, based on the site assessment results, it is not feasible to meet the generic provincial remedial objectives, there is an option in most provinces to perform a detailed risk assessment to develop site-specific or risk-based remediation objectives. The risk assessment must demonstrate that the site-specific objectives will protect both the environment and human health to the same extent as the generic objectives, if those objectives could have been met. **Parties typically involved:** municipal engineers and planners, environmental consultants, risk assessors.

### 2.4 Remedial objective determination

The final remedial objectives for the site are determined in this step. These could be either generic remedial objectives set by the province or territory, or the equally protective site-specific or risk-based remedial objectives. **Parties typically involved:** municipal engineers and planners, environmental consultants.

### 2.5 Remediation or risk management feasibility studies/optimization

In this step, remediation or risk management options for the site are evaluated. This could entail a study evaluating the feasibility of various options, based on available literature or based on past experience. It could also include an in-depth bench- or field-scale analysis to support the selection of a specific technology or method, or to optimize the operating parameters for a specific technology or method. **Parties typically involved:** municipal engineers and planners, environmental consultants, remediation contractors.

### 2.6 Remedial/risk management action planning

Based on the review of the remediation and risk management options applicable to and viable for the site, the final options are selected and a remedial action plan is developed to outline how these options will be implemented. Where possible, this plan should include the use of *sustainable approaches*. **Parties typically involved:** municipal engineers and planners, environmental consultants, remediation contractors.

## 3. Remediate

### 3.1 Building demolition and soil and waste recycling

This step involves building and infrastructure demolition and soil and waste removal (e.g. utilities, roads, above-ground or underground storage tanks). Where possible, soil and waste should be recycled on site or reused for other purposes. **Parties typically involved:** municipal engineers and planners, environmental consultants, remediation contractors, waste management contractors.

### 3.2 Remediation/risk management implementation

In this step, site remediation or risk management actions, or both, are carried out as described in the remedial action plan. Where possible, *sustainable remediation or risk management approaches* should be used. These activities are performed until the contamination is removed, altered, contained or destroyed to meet the provincial remedial objectives or the site-specific, risk-based objectives. **Parties typically involved:** municipal engineers and planners, environmental consultants, remediation contractors.

### 3.3 Confirmation of compliance or contaminated site closure

This step results in official verification that the site has met the established remediation or risk management objectives. The regulatory documentation required at this stage typically states three things:

- whether the site meets the regulatory requirements
- whether ongoing monitoring is required
- whether continued risk management is required

At this stage, the results of the remediation or risk management actions and the next steps for redevelopment are usually communicated to stakeholders and the community. **Parties typically involved:** municipal engineers and planners, environmental consultants, provincial officials.

## 4. Redevelop

### 4.1 Ongoing risk management and monitoring

Once remediation is complete or risk management activities have been implemented, long-term monitoring or risk management may be required, depending on the restrictions placed on the site. This could involve periodic sampling of soil or groundwater, or other restrictions placed on the site (e.g. limitations on excavation or on land use, or access controls). **Parties typically involved:** municipal engineers and planners, environmental and planning consultants, developers, construction contractors.

### 4.2 Design and construction of infrastructure

This step involves redevelopment activities, including the design and construction of infrastructure on the site. **Parties typically involved:** municipal engineers and planners, environmental and planning consultants, developers, construction contractors.

# Provincial Requirements

This section outlines the key pieces of Newfoundland and Labrador's brownfields legislation and policy positions related to each brownfield redevelopment step.

## Key legislation and sources of information\*

- Contaminated Sites, Part VII of the Environmental Protection Act (SNL 2002, Chapter E-14.2), contains provisions related to sites that have been designated as contaminated.
- The Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador (2014) describes in detail the process for managing impacted sites (both sites that are designated as contaminated under the Environmental Protection Act and non-designated sites). The outlined process is mandatory for designated sites. The guidance should also be followed for non-designated sites, as it greatly facilitates eventual site closure.

In Atlantic Canada, there has been considerable effort to harmonize the management of contaminated sites among the four provinces through the *Atlantic Risk Based Corrective Action* (RBCA or "Rebecca") process. This harmonization has been overseen by the *Atlantic Partnership in Risk Based Corrective Action Implementation* (Atlantic PIRI). Atlantic PIRI has established a number of tools and information sources for use by all provinces, including detailed information and training programs on how to use and apply Atlantic RBCA procedures. All four Atlantic provinces are active members of PIRI and continue to harmonize policies and develop appropriate tools and information sources.

## ➤ 1. Plan

### 1.1 Consider including a brownfield component in community plans

The Newfoundland and Labrador *Urban and Rural Planning Act, 2000*, contains provisions related to developing regional and municipal plans. Section 29 of the Act allows for the creation of development schemes that can be used to carry out local improvements. Under Section 31, municipalities can also develop plans for specific areas within the community by designating local planning areas. Brownfield redevelopment planning could be incorporated into these planning mechanisms.

---

\* NOTE: This document summarizes current provincial legislation and must not be regarded as a formal legal interpretation. Please refer to the identified legislation for complete details on legislative requirements, and seek legal advice if necessary.

## 1.2 Identify contaminated sites in the community

As a result of the *standard on liability for contaminated sites (Section PS 3260 of the CPA Canada Public Sector Accounting Handbook)*, municipalities may need to develop an inventory of contaminated or potentially contaminated sites in order to estimate and track the liabilities associated with them. In developing the inventory, careful consideration should be given to the scope of Section PS 3260.

Understanding the extent of contaminated or potentially contaminated land within the community will also help municipalities plan for brownfield redevelopment. The province's environmental sites database contains information on sites or properties that have been impacted or potentially impacted by an environmental contaminant. Once a site has been investigated, an entry is placed in the database regardless of whether contamination was discovered or whether any confirmed contaminants have been remediated. Property owners (or those who have authorization from a property owner) can obtain information on sites in the database by contacting the *Pollution Prevention Division* of the Department of Environment and Conservation.

## 2. Study

### 2.1 Perform site assessment

Section 28 of the *Environmental Protection Act* requires that environmental site assessments of designated contaminated sites be submitted to the Department of Environment and Conservation for review and approval. As outlined in the *Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador*, the environmental site assessment must be performed by a Site Professional who meets specific requirements (see *the Department of Environment and Conservation's list of environmental consulting firms with approved site professionals*). The assessment must also meet the minimum requirements set out in the *Atlantic RBCA guidance documentation*.

### 2.2 Determine acceptable contaminant concentration levels for the site

According to the *Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador*, a Site Professional identifies acceptable contaminant concentrations for a site, using a Tier I, Tier II or Tier III method. In Tier I, the acceptable clean-up criteria are selected from the Tier I Risk-Based Screening Level Table in the *Atlantic RBCA guidance documentation* (for petroleum hydrocarbons) or from the Canadian Council of Ministers of the Environment *Canadian Environmental Quality Guidelines* (for other contaminants). Tier II uses accepted risk assessment models, established protocols and modified Tier I assumptions to develop site-specific targets as outlined in the Guidelines. Tier III is used when Tier I or II methods are not applicable or viable, and may require the selection of site-specific targets or the implementation of risk management techniques to reduce or eliminate exposure to the identified contaminants.

### 2.3 Develop and submit a remedial action plan

Section 28 of the *Environmental Protection Act* requires remedial action plans for designated contaminated sites to be submitted to the Minister of Environment and Conservation for review and approval. A Site Professional must develop the remedial action plan, which must meet the requirements outlined in the *Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador*.

## 3. Remediate

### 3.1 Implement remedial action plan

The site must be remediated or risk managed as outlined in the approved remedial action plan, as per the *Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador*. Any deviation in the method or schedule outlined in the remedial action plan must be reported in writing to the province.

### 3.2 Submit Closure Report and Record of Site Condition

As outlined in the *Guidance Document for the Management of Impacted Sites in Newfoundland and Labrador*, once the Site Professional is satisfied that impacts have been satisfactorily addressed and unacceptable risks are not expected, the Person Responsible or Site Professional will submit a Closure Report to the province. The report includes a Record of Site Condition specific to the land use, demonstrating that the site meets remedial objectives. The Site Professional can recommend one of two options in the Record of Site Condition for closure of the site:

- Final Closure is recommended once it has been demonstrated that remedial objectives have been achieved and no further work is required.
- Conditional Closure is recommended when remediation is complete and a monitoring program is required to verify that all remedial objectives have been achieved. Once monitoring demonstrates to the satisfaction of the province that site conditions are stable, the Site Professional can submit a new Record of Site Condition recommending Final Closure.

### 3.3 Obtain site closure

Upon acceptance of the closure documentation, the province has two options for designating site closure:

- Unconditional Closure can be achieved by demonstrating (through an environmental site assessment, risk assessment, closure report or confirmatory sampling or monitoring) that the applicable Tier I, II or III criteria have been met. This type of closure usually permits unrestricted future development or use within the particular land use designation (agricultural, residential, commercial or industrial).
- Conditional Closure, which is often given if a risk management approach is used, requires ongoing site management using engineered controls, institutional controls or periodic monitoring to ensure adequate protection of human and environmental health for the designated land use.

---

## 4. Redevelop

### 4.1 Meet local government planning approval and permitting requirements

Refer to the local municipality for building and other permitting requirements.

### 4.2 Perform ongoing site management and monitoring

If a site has been given Conditional Closure, an individual (i.e. the Person Responsible, the current or future property owner, or a financial guarantor) must accept, in writing, long-term responsibility for ongoing site management and monitoring. For sites where institutional or building restrictions are required, the Site Professional or Person Responsible is required to notify and consult any affected stakeholders (such as the regulator and the municipality). Prior to Conditional Regulatory Closure, the province must be satisfied that the necessary site management controls will be maintained in future.

# Funding and Incentive Programs

This section details funding and incentive programs shown in the flowchart on page one:

- FCM's Green Municipal Fund (GMF) brownfield funding opportunities
- Federal programs that fund some aspect of brownfield redevelopment

## ➤ 1. Plan

### GMF grants for plans

Through GMF, FCM provides grants for plans, including community brownfield action plans (e.g. community brownfield strategies, community improvement plans or revitalization plans). FCM will provide up to 50 per cent of eligible project costs to a maximum of \$175,000. In most cases, GMF funding can be combined with federal and provincial funding.

**Status:** Currently accepting applications

**Contact:**

Federation of Canadian Municipalities  
Green Municipal Fund  
1-877-997-9926 • [gmf@fcm.ca](mailto:gmf@fcm.ca)

**For more information:** [\*FCM's Green Municipal Fund\*](#)

## ➤ 2. Study

### GMF grants for feasibility studies and pilot projects

Through GMF, FCM provides grants for feasibility studies (including Phase II environmental site assessments and remedial action planning) and pilot projects (including testing remediation techniques). FCM will provide up to 50 per cent of eligible project costs to a maximum of \$175,000 for feasibility studies and \$350,000 for pilot projects. In most cases, GMF funding can be combined with federal and provincial funding.

**Status:** Currently accepting applications

**Contact:**

Federation of Canadian Municipalities  
Green Municipal Fund  
1-877-997-9926 • [gmf@fcm.ca](mailto:gmf@fcm.ca)

**For more information:** [\*FCM's Green Municipal Fund\*](#)

### Sustainable Development Technology Canada — innovative technology development funding

Sustainable Development Technology Canada (SDTC) is a federally funded, not-for-profit foundation. SDTC finances and supports the development and demonstration of clean technologies that provide solutions to issues of climate change, clean air, water quality and soil, and deliver economic, environmental and health benefits to Canadians. On average, SDTC funds 33–50 per cent of eligible project costs.

**Status:** Currently accepting applications

**Contact:**

Sustainable Development Technology Canada  
613-234-6313 • [info@sdtc.ca](mailto:info@sdtc.ca)

**For more information:** [\*Sustainable Development Technology Canada\*](#)

## 3. Remediate

### GMF loans for brownfield capital projects

Through GMF, FCM provides loans for remediation and risk management activities at brownfield sites. Up to 80 per cent of eligible project costs are covered. In most cases, GMF funding can be combined with federal and provincial funding.

**Status:** Currently accepting applications

**Contact:**

Federation of Canadian Municipalities  
Green Municipal Fund  
1-877-997-9926 • [gmf@fcm.ca](mailto:gmf@fcm.ca)

**For more information:** [\*FCM's Green Municipal Fund — Brownfields Sector Funding\*](#)

### New Building Canada Fund

The \$10-billion Provincial–Territorial Infrastructure Component (PTIC) of the New Building Canada Fund (NBCF) is intended to support infrastructure projects of national, regional and local significance that contribute to economic growth, a clean environment and stronger communities. The PTIC is divided into two sub-components:

- \$9 billion for national and regional projects
- \$1 billion for projects located in communities of fewer than 100,000 residents, through the Small Communities Fund

These 10-year funding programs run from 2014 to 2024 and will operate concurrently with the federal Gas Tax Fund. Brownfield redevelopment projects are eligible under these programs. Specifically, the programs will fund the remediation or decontamination and the redevelopment of a brownfield site within municipal boundaries, where the redevelopment includes at least one of the following components:

- the construction of public infrastructure as identified in the context of any category under the NBCF
- the construction of municipal-use public parks and affordable housing

**Status:** Currently accepting applications

**Contact:**

Infrastructure Canada  
613-948-1148 • [info@infc.gc.ca](mailto:info@infc.gc.ca)

**For more information:** [\*Infrastructure Canada's New Building Canada Fund website\*](#)

## 4. Redevelop

### GMF loans and grants for redevelopment capital projects

Through GMF, FCM provides loans and grants for redevelopment activities related to energy, water, waste and transportation. Funding is provided for up to 80 per cent of eligible project costs. The loan maximum is \$5 million, and grants are available for up to 15 per cent of the loan. Applicants with high-ranking projects may be eligible for a loan of up to \$10 million combined with a grant for 15 per cent of the loan amount, to a maximum of \$1.5 million. In most cases, GMF funding can be combined with federal and provincial funding.

**Status:** Currently accepting applications

**Contact:**

Federation of Canadian Municipalities  
Green Municipal Fund  
1-877-997-9926 • [gmf@fcm.ca](mailto:gmf@fcm.ca)

**For more information:** [\*FCM's Green Municipal Fund\*](#)

### New Building Canada Fund

See Remediation section above.

### Private funding from financial institutions and developers

Municipalities should also seek information on private funding sources to assist with brownfield redevelopment activities.
